

Special session  
on

## **Grid Computing and Applications**

Abstract

The aim of this special session is to bring together researchers in Grid Computing and related applications to present advances in Grid Technology and most pressing research issues. Equal attention will be devoted to usage of Grid for computationally challenging modeling and simulation. We believe that meeting in a relaxed atmosphere of a beautiful high mountain resort can be very constructive and thought provoking. Therefore we would like to invite researchers in the Grid area to contribute papers covering the following topics:

- Grid middleware, tools and services
- Performance, monitoring, data management
- Modelling and simulation in Grid environment
- Grid applications
