

The Bulgarian section of GAMM – GAMM BG organize as a part of the annual conference of BGSIAM thematic session “Applied mathematics. Computational mechanics”

The advanced mathematics is the basement of the up-to-date mechanics. The scientific practice in many cases proved that the applied mechanics provoked new mathematical theories and deductions. That was since the ancient times (Pythagoras, Archimedes, and the Athens school) till the present century of the computational mechanics.

The members of GAMM BG are kindly requested to take part in this session and to invite his colleagues from other Bulgarian institutes and universities, as well as, abroad.

The session is included in the program of the annual conference of BG SIAM 2016.
