

# Global Convergence Properties of the SOR-Weierstrass Method

V. H. Hristov, N. V. Kyurkchiev, A. I. Iliev

In this paper we give sufficient conditions for  $k$ -th approximations of the zeros of polynomial  $f(x)$  under the successive over-relaxation Weierstrass method (SORW) fails on the next step. This is a further improvement of the known results. Interesting numerical examples are presented.
