Part I Surveying Theories and Philosophies of Mathematics Education

Preface to Part I	3
Jeremy Kilpatrick	
References	5
Surveying Theories and Philosophies of Mathematics Education	7
Bharath Sriraman and Lyn English	
Preliminary Remarks	7
Imre Lakatos and Various Forms of Constructivism	8
Theory Development	10
Theory and Its Role in Mathematics Education	12
Changes in Theoretical Paradigms	13
Are We Progressing?	15
Home-Grown Theories versus Interdisciplinary Views	16
European Schools of Thought in Mathematics Education	18
Didactique des Mathématiques—The French Tradition	19
The Royaumont Seminar	20
Impact of Theories on Practice	24
Closing Summary	25
References	27

Part II Reflections on Theories of Learning

Preface to Part II Ernest's Reflections on Theories of Learning	35
Bharath Sriraman and Nick Haverhals	
References	38

Reflections on Theories of Learning 39

 Paul Ernest

 Construction 39

 Radical Constructivism 41

 Enactivism 42

 Social Constructivism 43

 Implications for Educational Practice 45

 References 46

Commentary 1 on Reflections on Theories of Learning by Paul Ernest . . 49

 Simon Goodchild

Part IV Theories of Mathematics Education: Is Plurality a Problem?

Preface to Part IV 97
 Norma Presmeg

Theories of Mathematics Education: Is Plurality a Problem? 99
 Stephen Lerman

- Introduction 99
- A Language of Research Fields 100
 - Hierarchical Discourses 100
 - Vertical Knowledge Structures 101
- Theories in Use in Mathematics Education 103
- Discussion 106
- Conclusion 108
- References 109

Commentary on Theories of Mathematics Education: Is Plurality a Problem? 111
 Eva Jablonka and Christer Bergsten

- Expansion of the Knowledge 111
- Communication and ‘Translation’ Between Discourses 113
- The Social Turn or the Social Branch? 114
- A Plurality of Rival Discourses Within an ‘Approach-Paradigm’? . . 114
- Unbalanced Theory Reception 115
- Concluding Remark 116
- References 117

Part V Re-conceptualizing Mathematics Education as a Design Science

Preface to Part V 121
 Lyn D. English

- References 122

Re-conceptualizing Mathematics Education as a Design Science 123
 Richard Lesh and Bharath Sriraman

- A Brief History of Our Field 123
- What Is a Design Science? 124
- Observations about Mathematics Education as a Distinct Field of
 - Scientific Inquiry 128
- Preliminary Implications for Mathematics Education 130
- Most of the Systems We Need to Understand Are Complex,
 - Dynamic, and Continually Adapting 133
- What Kind of Explanations are Appropriate for Comparing Two
 - Complex Systems? 137

Lack of Cumulativeness is Our Foremost Problem 139
 Summary—Comparing Ideologies, Theories and Models 142
 Concluding Points 143
 References 145

**Part VI The Fundamental Cycle of Concept Construction Underlying
 Various Theoretical Frameworks**

Preface to Part VI 171
 Stephen J. Hegedus

**The Fundamental Cycle of Concept Construction Underlying Various
 Theoretical Frameworks** 173
 John Pegg and David Tall
 Introduction 173
 Local Cycles 176
 Process-Object Encapsulation 179
 Similar Cycles in Different Modes 182
 SOLO and Local Cycles of Development 184
 Developments in Global and Local Theory 187
 Discussion 189
 References 191

Commentary on The Fundamental Cycle of Concept Construction

Underlying Various Theoretical Frameworks 193
 Bettina Dahl
 Introduction 193
 Fundamental Cycles of Concept Construction Underlying Various
 Theoretical Frameworks 193
 Another Framework of Cognitive Processes 196
 Merging the Frameworks 197
 Where Are We as a Field? 199
 How Do We Move Forward? 200
 Discontinuity and Lack of Progress 201
 Is Complementarity the Solution? 201
 Are We Shooting with a Shotgun Then? 202
 Scientific Growth Through Falsifications 203
 Unified Theory and Truth 204
 Conclusions 205
 References 206

Part VII Symbols and Mediation in Mathematics Education

Preface to Part VII 211
 Stephen J. Hegedus

Symbols and Mediation in Mathematics Education 213
 Luis Moreno-Armella and Bharath Sriraman
 Introduction 213
 Arithmetic: Ancient Counting Technologies 218
 Mathematics from a Dynamic Viewpoint: The Future of
 Mathematics Education 221
 Computational and Cognitive Technologies 222
 Domains of Abstractions 224
 Induction and Deduction: The Computer as a Mediating Tool 227
 Algorithms, Representations and Mathematical Thinking 228
 Representational Fluidity in Dynamic Geometry 230
 References 231

Commentary on Symbols and Mediation in Mathematics Education . . . 233
