

A sufficient condition for tangential transversality

Nadezhda K. Ribarska^{*}, Mikhail I. Krastanov[†]

A sufficient condition for tangential transversality involving measures of non-compactness as well as a Lagrange multiplier theorem for the infinite-dimensional optimization problem are obtained. The relation of the obtained results to the basic problem of calculus of variations is discussed. Also, an application to the problem of calculus of variations in the presence of pure state constraints of inequality type is presented.
