Handbook of Special Functions

Derivatives, Integrals, Series and Other Formulas

Yury A. Brychkov
 Computing Center of the Russian Academy of Sciences, Moscow, Russia

NEW RESULTS FOR A CONTINUOUSLY DEVELOPING CLASSES OF FUNCTIONS

The numerous applications of special functions in solving many problems in mathematics, physics and engineering, make their development a continuous and evolving process. Bringing new insight to these functions, the **Handbook of Special Functions: Derivatives, Integrals, Series and Other Formulas** presents new results and includes some known formulas for completeness in coverage. This collection of functions contains—

- Differentiation formulas for various functions
- Limit formulas for the special functions that depend on parameters
- Formulas of integration and summation for elementary and special functions, new class integrals, finite sums, and infinite series being considered
- Connection formulas for various elementary and special functions
- Representations of hypergeometric functions and Meijer G functions in terms of other functions for various values of parameters and arguments
- Representations of a variety of elementary and special functions in terms of hypergeometric functions

Provides the Tools for Solving a Diversity of Problems

The author pays special attention to formulas of derivatives of n th order with respect to the argument and of the first derivatives with respect to the parameters of most elementary and special functions. A considerable part of the book is devoted to formulas of connection and conversion for elementary and special functions, especially for hypergeometric and Meijer G functions, and it concludes with a list of standard notations. The handbook provides the tools necessary for solving the diversity of problems whose solutions require knowledge of elementary and special functions of mathematical physics.

FEATURES

- Presents large tables of symbolic differentiation formulas and derivatives with respect to parameters
- Covers new classes of integrals, finite sums, and infinite series
- Presents various relations for hypergeometric functions, Meijer G functions, and complete elliptic integrals
- Supplies new formulas of connection for various classical special functions
